CHETAN BABU BHAT

AI / ML Enthusiast | Web Developer | Cloud & DevOps Learner

Lalitpur, Nepal • chetanbabubhat9@example.com • github.com/Arbinbabu
• linkedin.com/in/chetanbabubhat

TECHNICAL SKILLS

AI / ML: LSTM, GRU, TCN, ARIMA, Transformer, NLP, Anomaly Detection, Time Series Forecasting
Programming: Python, JavaScript
Web Framework: Streamlit, React, Node.js, Express
Frontend: HTML, CSS, React
Database: MongoDB
Cloud / DevOps: AWS (EC2, S3, IAM) , Docker, Kubernetes, GitHub Actions CI/CD
Networking: TCP/IP, DNS, HTTP/HTTPS, REST APIs, VPN
Libraries: TensorFlow, Keras, pandas, NumPy, scikit learn, statsmodels, Matplotlib, Seaborn
Tools: Git, GitHub, VS Code,

CAREER OBJECTIVE

I am a Computer Engineer(final semester result waiting). I really love working with Artificial Intelligence and Machine Learning. I have built many web applications in college project. I have worked with cloud infrastructure. I know about DevOps practices.I like to use technology to solve world problems. I want to build systems that're smart and can handle a lot of work. I am looking for a job where I can work on Artificial Intelligence projects and cloud projects from home. I think Artificial Intelligence is very interesting and I want to contribute to Artificial Intelligence projects.

EDUCATION

Bachelor of Engineering in Computer Engineering
Everest Engineering College, Pokhara University | Lalitpur, Nepal 2021 – 2026

- CGPA: 3.0 / 4.0
- Focus: AI, Machine Learning, Software Engineering

PROJECTS

➢ Comparative Analysis of LSTM, GRU & TCN for Insider Threat Detection
Final Year Project | Everest Engineering College | March 2026

- I did research on deep learning for detecting insider threats using unusual behavior. I used the CMU CERT Insider Threat Dataset r4.2 which had data from 90 users and 3 different threat scenarios.
- I created a process to prepare the data: changing log data selecting important features scaling them and labeling them as good or bad. This was done for 47 features from logon, file, HTTP, email and device logs.
- I trained three types of models. LSTM, GRU and TCN. Using a way of optimizing and a type of error measurement. I split the data into 70% for training 15% for checking and 15% for testing.
- LSTM model results: 92.70% 93.15% recall, F1 score of 92.65% and an AUPRC of 0.9732.
- GRU model results: 92.58% accurate. It had 23% fewer parts, than the LSTM model.
- TCN model results: 96% 96.24% recall, F1 score of 95.94% and an AUPRC of 0.9887. This was the model and used a special way of connecting layers with 5 blocks.

➢ Stock Market Prediction (NEPSE)

Academic Project | Streamlit | Python

- I built a web app to predict NEPSE stock prices using LSTM and ARIMA models.
- For the LSTM model I used sequences of 60 days. Split my data into 80% for training and 20% for testing. I also used stopping to make sure it performed well.
- For the ARIMA model I applied the ADF test. Used auto_arima to get the best parameters.
- I compared how well both models worked using RMSE, R^2 and MAPE.
- I tested my models on stocks, like NABIL, CHCL, SCB and NFS.

➢ FitHub – Fitness And Workout Platform

4th Semester Project | 2023 – 2024

- FitHub is a stack fitness application that has workout plans and nutrition tracking and analytics.
- It is the FitHub fitness application that really helps people with their fitness goals. • The FitHub application has a REST API that is built with Node.js and MongoDB.
- The REST API of FitHub uses JWT authentication. Has real time updates.
- The FitHub application uses networking fundamentals like design and HTTP methods and secure token transport to make it work properly.

EXPERIENCE

- Project-Based Experience. AI/ML Research and Full Stack Development
- I did research on detecting insider threats in my year. My model, TCN was really accurate. It achieved 96% accuracy and an AUPRC of 0.9887 on the CERT r4.2 dataset.
- I built web apps for stock forecasting using Streamlit. These apps used two models, LSTM and ARIMA to make predictions for the NEPSE stock.
- I have experience designing deep learning models adjusting their settings and evaluating them using metrics like RMSE, F1, AUC and precision-recall.
- Through my projects I got hands-on experience with AWS, Docker and automated deployment pipelines.
- I am open, to jobs and freelance projects.

ADDITIONAL INFORMATION

- I am familiar with the following languages: Nepali and English.
- I am available to work on jobs that can be done from home and freelance projects.
- My main goal is to become really good at Artificial Intelligence and Machine Learning. I am also trying to learn more about Cloud and DevOps.
- The things that interest me are Artificial Intelligence systems predicting what will happen in the future, Natural Language Processing using Machine Learning for cybersecurity and creating applications on the cloud.
- My strengths are that I am very good, at analyzing things I can learn on my own. I really love coming up with new Artificial Intelligence ideas.
